

Date:

Morning Preparation

- ☐ **Mark off Daily POI's (Order blocks from wick point, imbalances, gaps)**
 - ☐ **Mark off Daily Open**
 - ☐ **Determine whether we are in a premium or discount array based off H3 fib.** *This determines direction for the day (For a steep retracement, price will need to close past a short term level on the h3)*
 - ☐ **Draw H3/H8 premium levels** *(10 pips or less based off the first clean OB) correlated to PD array*
 - ☐ **Mark H3 imbalance midpoints.** *Keep in mind, them by their self aren't very strong but in confluence with fib, iop, etc can be respected. Price does respect midpoint a lot*
 - ☐ **What news events release today and what time?**
-

If one news release at 7:15-7:30, trade after news

If one news release at 9:00-9:30 look for trade setup from 7:00 to 7:30

If 2 news release at 7:15 and 9:00 trades can be taken after the 1st and second news

If only fomc news at 1:00 pm trade as normal before

- ☐ **Where do you anticipate price reaching to today?**
-

Things To Remember

- **News usually pushes price to the POI and presents a set up AFTER. Don't rush in**
- **A lot of retests to POI happen after 9am CST also so be patient**
- **Price flows from Order pool to Order pool**
- **Order flow switches only come from H3/H8 order pools. Transitions from no mans land are invalid**

TGFX TRADING PLAN

- Check and mark off the previous daily range and Daily open
- Draw h3 fib to determine if price is trading in premium or discount
 - If price is in discount, only look for buys
 - If price is in premium, only look for sells
- Draw out H3/H8 IOP correlating to the PD array

Is Price at an H3/H8 Order Pool?

Yes

If no,  and Wait

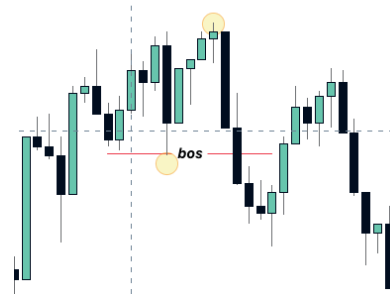

Did M1 break a short term level?

Highlight the last high and low for entire session

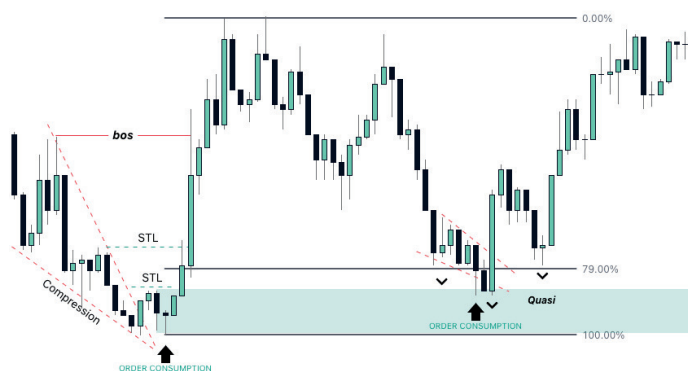

If no,  and Wait

Yes

Look for Order Flow Principles

Highlight them as they form

- Quasi
- Break of 2 or more short term highs/lows
- Switch in order consumption
- Switch in bases being created and respected
- Compression
- Microstructure Break
- Look for SOW to support the move

Is price retesting into the first imbalance created past 50%?

Yes

No

Take the trade. With stop loss placed above/below the highest/lowest structure point on M1.

If no,  and Wait

SL should always be minimum 7 pips and ideally outside the range of the IOP

Did you follow your plan? Yes/No (If no, explain)

On a scale of 1-10 how good was this setup? Why?

What could I have done better?

How was your psychology?

Notes?

 - ☐ **Mark off Daily Open**
 - ☐ **Determine whether we are in a premium or discount array based off H3 fib.** *This determines direction for the day (For a steep retracement, price will need to close past a short term level on the h3)*
 - ☐ **Draw H3/H8 premium levels** *(10 pips or less based off the first clean OB) correlated to PD array*
 - ☐ **Mark H3 imbalance midpoints.** *Keep in mind, them by their self aren't very strong but in confluence with fib, iop, etc can be respected. Price does respect midpoint a lot*
 - ☐ **What news events release today and what time?**
-

If one news release at 7:15-7:30, trade after news

If one news release at 9:00-9:30 look for trade setup from 7:00 to 7:30

If 2 news release at 7:15 and 9:00 trades can be taken after the 1st and second news

If only fomc news at 1:00 pm trade as normal before

- ☐ **Where do you anticipate price reaching to today?**
-

Things To Remember

- **News usually pushes price to the POI and presents a set up AFTER. Don't rush in**
- **A lot of retests to POI happen after 9am CST also so be patient**
- **Price flows from Order pool to Order pool**
- **Order flow switches only come from H3/H8 order pools. Transitions from no mans land are invalid**

TGFX TRADING PLAN

- Check and mark off the previous daily range and Daily open
- Draw h3 fib to determine if price is trading in premium or discount
 - If price is in discount, only look for buys
 - If price is in premium, only look for sells
- Draw out H3/H8 IOP correlating to the PD array

Is Price at an H3/H8 Order Pool?

Yes

If no,  and Wait

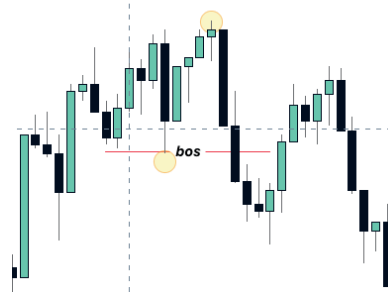

Did M1 break a short term level?

Highlight the last high and low for entire session

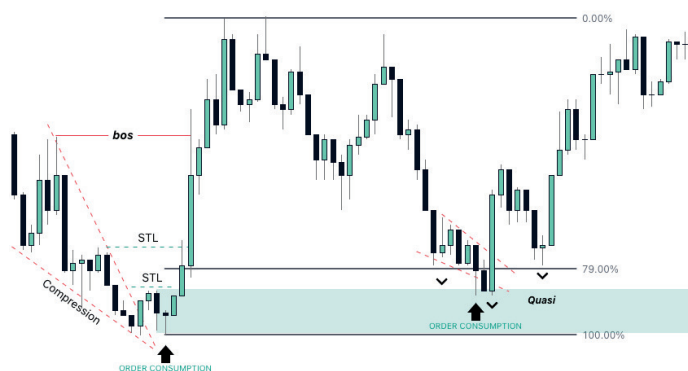

If no,  and Wait

Yes

Look for Order Flow Principles

Highlight them as they form

- Quasi
- Break of 2 or more short term highs/lows
- Switch in order consumption
- Switch in bases being created and respected
- Compression
- Microstructure Break
- Look for SOW to support the move

Is price retesting into the first imbalance created past 50%?

Yes

No

Take the trade. With stop loss placed above/below the highest/lowest structure point on M1.

If no,  and Wait

SL should always be minimum 7 pips and ideally outside the range of the IOP

Did you follow your plan? Yes/No (If no, explain)

On a scale of 1-10 how good was this setup? Why?

What could I have done better?

How was your psychology?

Notes?

 - ☐ **Determine whether we are in a premium or discount array based off H3 fib.** *This determines direction for the day (For a steep retracement, price will need to close past a short term level on the h3)*
 - ☐ **Draw H3/H8 premium levels** *(10 pips or less based off the first clean OB) correlated to PD array*
 - ☐ **Mark H3 imbalance midpoints.** *Keep in mind, them by their self aren't very strong but in confluence with fib, iop, etc can be respected. Price does respect midpoint a lot*
 - ☐ **What news events release today and what time?**
-

If one news release at 7:15-7:30, trade after news

If one news release at 9:00-9:30 look for trade setup from 7:00 to 7:30

If 2 news release at 7:15 and 9:00 trades can be taken after the 1st and second news

If only fomc news at 1:00 pm trade as normal before

- ☐ **Where do you anticipate price reaching to today?**
-

Things To Remember

- **News usually pushes price to the POI and presents a set up AFTER. Don't rush in**
- **A lot of retests to POI happen after 9am CST also so be patient**
- **Price flows from Order pool to Order pool**
- **Order flow switches only come from H3/H8 order pools. Transitions from no mans land are invalid**

TGFX TRADING PLAN

- Check and mark off the previous daily range and Daily open
- Draw h3 fib to determine if price is trading in premium or discount
 - If price is in discount, only look for buys
 - If price is in premium, only look for sells
- Draw out H3/H8 IOP correlating to the PD array

Is Price at an H3/H8 Order Pool?

Yes

If no,  and Wait

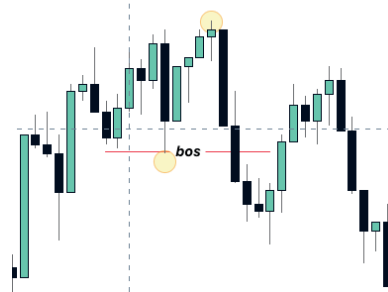

Did M1 break a short term level?

Highlight the last high and low for entire session

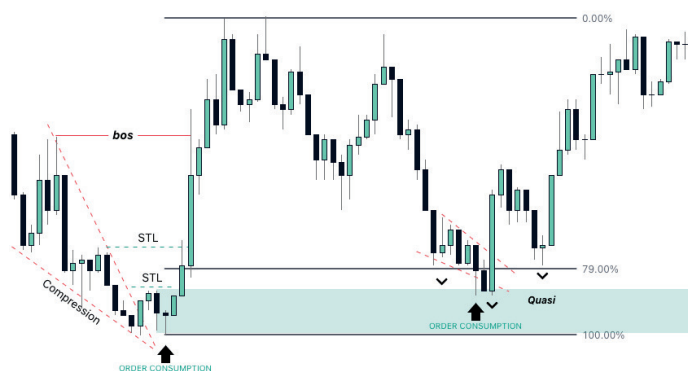

If no,  and Wait

Yes

Look for Order Flow Principles

Highlight them as they form

- Quasi
- Break of 2 or more short term highs/lows
- Switch in order consumption
- Switch in bases being created and respected
- Compression
- Microstructure Break
- Look for SOW to support the move

Is price retesting into the first imbalance created past 50%?

Yes

No

Take the trade. With stop loss placed above/below the highest/lowest structure point on M1.

If no,  and Wait

SL should always be minimum 7 pips and ideally outside the range of the IOP

Did you follow your plan? Yes/No (If no, explain)

On a scale of 1-10 how good was this setup? Why?

What could I have done better?

How was your psychology?

Notes?

 - ☐ **Determine whether we are in a premium or discount array based off H3 fib.** *This determines direction for the day (For a steep retracement, price will need to close past a short term level on the h3)*
 - ☐ **Draw H3/H8 premium levels** *(10 pips or less based off the first clean OB) correlated to PD array*
 - ☐ **Mark H3 imbalance midpoints.** *Keep in mind, them by their self aren't very strong but in confluence with fib, iop, etc can be respected. Price does respect midpoint a lot*
 - ☐ **What news events release today and what time?**
-

If one news release at 7:15-7:30, trade after news

If one news release at 9:00-9:30 look for trade setup from 7:00 to 7:30

If 2 news release at 7:15 and 9:00 trades can be taken after the 1st and second news

If only fomc news at 1:00 pm trade as normal before

- ☐ **Where do you anticipate price reaching to today?**
-

Things To Remember

- **News usually pushes price to the POI and presents a set up AFTER. Don't rush in**
- **A lot of retests to POI happen after 9am CST also so be patient**
- **Price flows from Order pool to Order pool**
- **Order flow switches only come from H3/H8 order pools. Transitions from no mans land are invalid**

TGFX TRADING PLAN

- Check and mark off the previous daily range and Daily open
- Draw h3 fib to determine if price is trading in premium or discount
 - If price is in discount, only look for buys
 - If price is in premium, only look for sells
- Draw out H3/H8 IOP correlating to the PD array

Is Price at an H3/H8 Order Pool?

Yes

If no,  and Wait

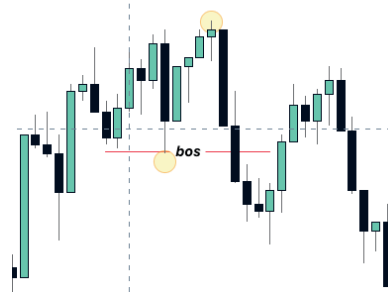

Did M1 break a short term level?

Highlight the last high and low for entire session

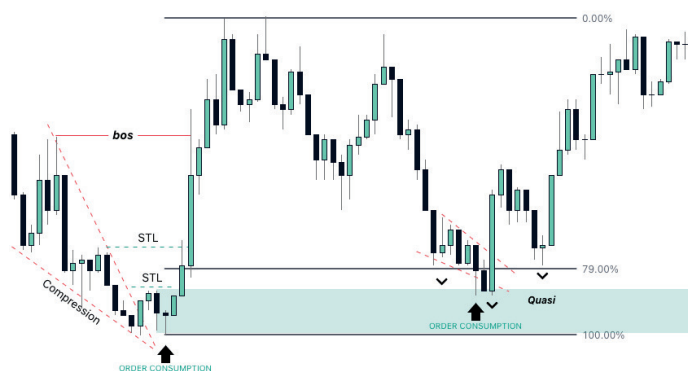

If no,  and Wait

Yes

Look for Order Flow Principles

Highlight them as they form

- Quasi
- Break of 2 or more short term highs/lows
- Switch in order consumption
- Switch in bases being created and respected
- Compression
- Microstructure Break
- Look for SOW to support the move

Is price retesting into the first imbalance created past 50%?

Yes

No

Take the trade. With stop loss placed above/below the highest/lowest structure point on M1.

If no,  and Wait

SL should always be minimum 7 pips and ideally outside the range of the IOP

Did you follow your plan? Yes/No (If no, explain)

On a scale of 1-10 how good was this setup? Why?

What could I have done better?

How was your psychology?

Notes?

 - ☐ **Determine whether we are in a premium or discount array based off H3 fib.** *This determines direction for the day (For a steep retracement, price will need to close past a short term level on the h3)*
 - ☐ **Draw H3/H8 premium levels** *(10 pips or less based off the first clean OB) correlated to PD array*
 - ☐ **Mark H3 imbalance midpoints.** *Keep in mind, them by their self aren't very strong but in confluence with fib, iop, etc can be respected. Price does respect midpoint a lot*
 - ☐ **What news events release today and what time?**
-

If one news release at 7:15-7:30, trade after news

If one news release at 9:00-9:30 look for trade setup from 7:00 to 7:30

If 2 news release at 7:15 and 9:00 trades can be taken after the 1st and second news

If only fomc news at 1:00 pm trade as normal before

- ☐ **Where do you anticipate price reaching to today?**
-

Things To Remember

- **News usually pushes price to the POI and presents a set up AFTER. Don't rush in**
- **A lot of retests to POI happen after 9am CST also so be patient**
- **Price flows from Order pool to Order pool**
- **Order flow switches only come from H3/H8 order pools. Transitions from no mans land are invalid**

TGFX TRADING PLAN

- Check and mark off the previous daily range and Daily open
- Draw h3 fib to determine if price is trading in premium or discount
 - If price is in discount, only look for buys
 - If price is in premium, only look for sells
- Draw out H3/H8 IOP correlating to the PD array

Is Price at an H3/H8 Order Pool?

Yes

If no,  and Wait

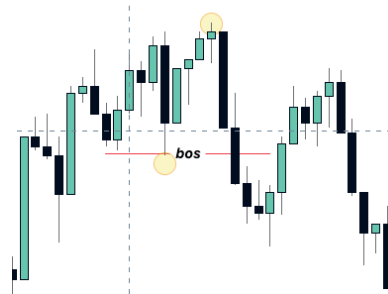

Did M1 break a short term level?

Highlight the last high and low for entire session

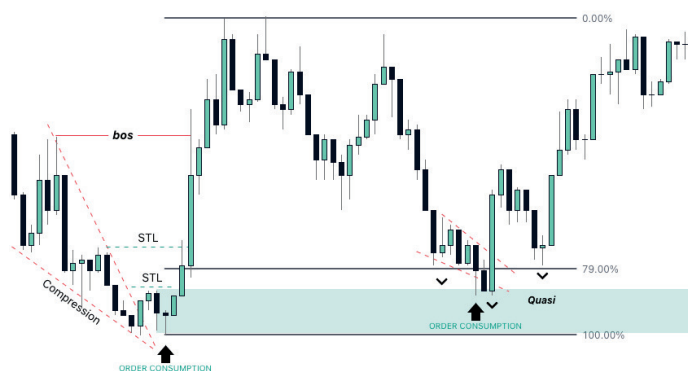

If no,  and Wait

Yes

Look for Order Flow Principles

Highlight them as they form

- Quasi
- Break of 2 or more short term highs/lows
- Switch in order consumption
- Switch in bases being created and respected
- Compression
- Microstructure Break
- Look for SOW to support the move

Is price retesting into the first imbalance created past 50%?

Yes

No

Take the trade. With stop loss placed above/below the highest/lowest structure point on M1.

If no,  and Wait

SL should always be minimum 7 pips and ideally outside the range of the IOP

Did you follow your plan? Yes/No (If no, explain)

On a scale of 1-10 how good was this setup? Why?

What could I have done better?

How was your psychology?

Notes?

Date:

Morning Preparation

- ☐ **Mark off Daily POI's (Order blocks from wick point, imbalances, gaps)**
 - ☐ **Mark off Daily Open**
